Joma's R&D department has developed a system that incorporates large oval perforations in the fabric in most part of the garment, allowing for a fluid movement of air and therefore ensuring that sweat evaporates more quickly.

This fabric manages to reduce the temperature by one and a half degrees, allowing for a better cooling of the athlete's body. Therefore, sweat does not increase the weight of the garment and the temperature is reduced in extreme conditions.

The design of these oval-shaped perforations, directed vertically and perpendicular towards the center and downwards, forms a channel for greater breathability.

Body stocking designed with rounded collar manufactured entirely using flat seams to prevent chafing. Characterised by its lightness and its tight fit thanks the zip located at the back. The Joma triathlon suit has been developed to guarantee fit and comfort thanks to the incorporation of the Flatlock seam system that avoids any rubbing optimizing comfort during sports, in addition to laser-cut finishes. The fabric designed exclusively for this sport has the effect of a second skin, increasing aerodynamics by reducing air friction, translating into increased speed. This garment is made of elastane, breathable and antibacterial polyamide that repels water to keep the body dry. Includes a zipper in the back area with a long puller to make it easier for the athlete to put on and take off. Printed logo.
